

Hello

Following are my comments.

- 1). The port authority should be accountable to the public , providing easy access to information, especially in regard to future plans.
- 2) Studies must be carried out by independent, non-biased consultants, and their reports should be publicly accessible.
- 3) the port authority should be subject to review by appropriate government agencies on an annual basis.

What affects the Fraser River delta and the Salish Sea will affect us all.
