## **GENERAL**

### **KNOWLEDGE REQUIREMENTS**

There is no mandatory ground school for an Airline Transport Pilot Licence - Aeroplane. An applicant is expected to have mastered the various subjects included in this guide and to demonstrate that knowledge by passing two written examinations. The Airline Transport Pilot Licence – Aeroplane also requires a multi-engine instrument rating, therefore an applicant without such a valid rating must complete the requirements for an instrument rating as well.

## ANNEX 1

Airline transport Pilots are expected to be able to correct aircraft imbalance. Below is a formula for shifting weights.

### WEIGHT SHIFT FORMULA

$$\frac{\text{WEIGHT OF CARGO MOVED}}{\text{WEIGHT OF AEROPLANE}} = \frac{\text{DISTANCE CG MOVED}}{\text{DISTANCE BETWEEN ARM LOCATION}}$$

Airline Transport Pilots are expected to use and interpret loading and performance charts and tables applicable to two-crew aeroplanes. Applicants should review charts such as takeoff performance charts, cruise performance charts, buffet boundary charts, descent charts, landing performance charts and aircraft loading charts. Airline Transport Pilots must understand how weight, altitude, configuration and environmental factors affect aircraft performance.

Airline Transport Pilots are expected to interpret computer-generated flight plans and extract information from them. Below is a sample computer-generated flight plan with a list of abbreviations.
